## SUMMARY

Data scientist with a strong background in applied research and development in computational biology, scientific computing, machine learning, and statistics. Passionate about improving business processes through sound experimental design and analysis.

## TECHNICAL SKILLS

<b>Expertise</b>	Data analysis, algorithms, machine learning, statistical modeling, quality control, systems engineering, ETL, data mining, optimization, computational biology
<b>Programming</b>	R, Python, Javascript, C/C++, Java, SQL, Git, Docker, AWS
<b>Software</b>	RStudio, Jupyter, tidyverse, ggplot2, caret, pandas, numpy, scipy, scikit-learn, shiny, Tableau, Airflow, Spark, H2O, biopython, bioconductor, Stan
<b>Machine Learning</b>	Classification, regression, clustering, feature engineering, validation
<b>Statistics</b>	Bayesian inference, hierarchical modeling, hypothesis testing, power analysis, dimensionality reduction
<b>Bioinformatics</b>	Sequence alignment, variant calling, expression analysis, NGS

## PROFESSIONAL EXPERIENCE

**Twist Bioscience**, Senior Data Scientist (Bioinformatics) 2015-Present

Develop and deploy predictive models to optimize manufacturing processes involving gene design and assembly, DNA fragmentation screening, and clonal colony picking. Design and analysis of experiments in coordination with process chemists to improve DNA synthesis technology. Primary architect behind data analytics platform utilizing data warehouse and ETL processes. Supervised data science interns.

**Veracyte**, Scientist II (R&D, Data Analysis Team) 2014-2015

Developed high dimensional classification models for cancer diagnostics. Provided statistical support for cross-run variability studies and power analysis for experimental designs. Drove transition from microarray technology to next-generation sequencing based assays through development of high performance automated data analysis pipelines.

**Smithsonian Institution**, Data Scientist (Office of the CIO) 2013-2014

Provided analytical support to museum and zoological research scientists in population genetics, phylogenetics, and metagenomics. Developed genomic analyses on scientific computing clusters, including ensemble machine learning approach for classification of signatures of natural selection in genetic populations. Coordinated efforts among researchers, information technology offices, and academic and commercial partners to develop scientific computing infrastructure.

**Keygene**, Bioinformatician (Applied Systems Biology) 2009-2012

Developed data pipeline for inference of gene regulatory networks using differential expression and network analysis to identify candidate genes for mutagenesis trials in crop engineering applications. Conducted exploratory data analysis and mining of hyperspectral imaging data from field crops to identify signatures of drought exposure as part of efforts to develop high throughput digital phenotyping. Constructed computational models to simulate plant architecture using Lindenmayer systems as a basis for studying optimal space utilization in greenhouse production.

**Navy Medical Research Center**, Research Assistant (Biodefense Research Directorate) 2006-2009  
Applied sequence alignment, gene prediction, and clustering algorithms towards rapid identification of microbial pathogens from genomic sequencing data platforms. Developed high throughput data analytics system for collection, analysis, and reporting of pathogenomic data in SQL database used for multiple biodefense research applications.

## EDUCATIONAL EXPERIENCE

**Johns Hopkins University**, M.S. Computer Science 2015  
**University of Maryland College Park**, B.S. Biology 2006

## TEACHING EXPERIENCE

**Johns Hopkins University**, Graduate Teaching Assistant 2016-2018  
605.448 - Data Science  
605.445 - Artificial Intelligence

## VOLUNTEER EXPERIENCE

**Voteocracy**, Data Science Volunteer 2016  
Applied network analysis techniques to identify marketing targets from Twitter data.  
**Bayes Impact**, Data Science Intern 2015  
Developed multiclass predictive model of criminal activity based on geographic and census data.
